WHAT YOU'LL DISCOVER IN THIS PREVIEW

- The 5-component architecture every money-making AI agent must have
- A real HEARTBEAT.md template that scans GitHub bounties while you sleep
- How to run frontier-quality AI for **\$0/month** using local models
- The exact agent setup that earned one developer \$847 overnight on Gumroad

```
$ openclaw heartbeat --schedule '0 * * * *'  
Heartbeat: checking inbox...  
Revenue alert: +$847 from Gumroad overnight  
3 bounties auto-submitted to GitHub  
Total passive earnings this week: $3,241
```

This is not fiction. This terminal output was shared by an early OpenClaw user in the community Discord — six weeks after installing the tool for the first time.

CHAPTER 3 EXCLUSIVE PREVIEW

The 5-Component Agent That Earns While You Sleep

Most developers waste weeks trying to build income streams manually. The ones who succeed understand that an AI agent isn't just a chatbot — it's a five-layer system working in concert. Miss any one layer, and the machine stops printing money.

01 THE BRAIN (LLM)

Claude, GPT, Gemini, or free local Llama. Decides what action to take next. You can run this for \$0/month with Ollama — full chapter included in the complete book.

02 PERSISTENT MEMORY

Stores preferences, client history, and project state as Markdown files on disk. This is what makes your agent feel like a real employee, not a forgetful chatbot.

03 TOOLS (THE HANDS)

File read/write, shell execution, web browsing, API calls, email. Without tools, an agent is just a chatbot. With tools, it closes deals while you're at dinner.

04 SKILLS (SKILL.md)

Plain-English instruction files that tell your agent how to hunt bounties, write content, or build SaaS products. You write them once; they run forever.

05 THE SCHEDULER

The heartbeat system wakes your agent every 30 minutes to check its task list and take action. This is the difference between a tool and a digital employee.

WHAT THIS MACHINE CAN GENERATE

Income Stream	Monthly Range	Effort After Setup
Code Bounties	\$1,500 – \$3,000	Low
Micro-SaaS Products	\$1,000 – \$3,000	Very Low
Blog Ad Revenue	\$500 – \$2,000	Minimal
Freelance (AI-assisted)	\$2,000 – \$5,000	Medium

Newsletter Sponsorships	\$500 – \$1,500	Low
TOTAL POTENTIAL	\$5,700 – \$15,500	

YOU'VE SEEN THE PREVIEW.

Now Get the Complete Playbook.

The full book contains **16 chapters + 50 project ideas** covering every income stream, every agent, every deployment step — from your first \$1 to your first \$10,000 month.

- ✓ Chapter 4: Run frontier AI FREE with Ollama (zero API costs)
- ✓ Chapter 7: Copy-paste agent templates for bounty hunting, freelancing & SaaS
- ✓ Chapter 8: The exact GitHub bounty workflow earning \$1,500–\$3,000/month
- ✓ Chapter 12: Full /loop & cron scheduling — your 24/7 automation schedule
- ✓ Chapter 15: Deploy your product to Vercel in under 60 seconds
- ✓ Chapter 16: The 7-agent marketing team that runs itself overnight
- ✓ Bonus: 50 ready-to-launch money-making project ideas with revenue models
